Certified factory

Near market production of organic/ecologic garments at IVN/Gots certified factory in Eastern Europe!

The IVN certificate is probably the highest standard within organic/ecologic certification today. With the long-lasting and very close relationship with some of the best IVN certified fabric suppliers, we can offer the full, unbroken organic/ecologic chain from the cotton until the finished garment has left our warehouse.

IVN (which is the German certificate), and Gots (which is the international certificate), is normally considered as higher standard than i.e. the Swedish "KRAV" and the Dutch "SKAL".

Outstanding organic/ecologic cotton!

In close cooperation with our fabric suppliers and our customers, we have during several years tested the market of organic/ecologic cotton yarns to find the best quality and our choice fell on Peruvian cotton. The Peruvian cotton, which has very long fibers and is very even and bright in the colour, gives a very high quality garment with low peeling, low shrinkage and clear and even colours, even in bright colours.

Several customers are using our know-how in this field, and we offer off course the full package from sourcing, pattern making and sampling to production and shipment of the finished garment.

Now LTP is the first and only sewing factory in Eastern European, which is IVN and Gots certified. It means that we can offer our customers organic/ecologic garments with a fully proven documentation in all production processes.
